## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments filed 1/16/08 have been fully considered but they are not persuasive in regards to the claims. The examiner retracts the statement the "examiner feels..." and amends it to state the fabric would perform in the claimed manner as he specifically stated in the previous rejection. The claimed device is made of two different yarns having two different dimensional-transformation properties upon the exposure to water that is knitted as a double knit structure. The applicant claims no other method steps that differentiate from the device of Imamichi and there for must perform in the same manner.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 57-62 are rejected as best understood under 35 U.S.C. 102(b) as being anticipated by Imamichi (US 4,267,710). Imamichi discloses (abstract) a double-knit fabric composed of polyester and cotton fibers. The cotton yarn has a first degree of water absorbency and a first degree of dimensional-transformation upon exposure to water. The synthetic fibers have a second degree of water absorbency and a second degree of dimensional-transformation upon exposure to water. The fabric is a double

knit as stated above, thus is mechanically manipulated. Fig. 3 shows the cotton yarn 3 to the rear of the synthetic yarns 1 and 2. Cotton is a fiber that is hydrophilic which means it absorbs water, which causes the diameter of the fiber to grow. When the water exposed to it, the hydrophilic yarn (cotton) would absorb water, thus increasing in size as stated above. This reaction modifies the first structure of the fabric to a second when exposed to water as claimed. The increased diameter of the cotton yarn would "project" nodes onto the surface of the fabric, as the cotton yarns would be larger in diameter thus pushing the synthetic yarns outward creating nodes. Both the natural and synthetic fibers contribute into the node formation and the node formation would be spaced out across the garment from the intersection of the yarns. Imamichi states in Col. 2 lines 38-40, "invention may be advantageously sewn into various sport wear such as shirts..."

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3765

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
